Criteria for acceptance of innovation firm: small technology company with breakthrough innovation

Description of the park

Introduction

Technology centre AS CR was established by five research institutes of the Czech Academy of Sciences.

TC has been operated the business incubator (BIC) oriented on innovative and spin-off SMEs (IT, biotechnology, new materials ...) in the last period. The process of business incubation continues now in the project the Innovation Centre and Business Incubator (ICBI) in Prague of the consortium called Technology Innovation Centre CKD Prague. The project was supported by ERDF fund and is situated in revitalising zone of brownfield in Vysocany.

TC AS CR is active in technology transfer and consultancy about 7FP – Framework Programme EU.

It is the member of European networks EEN, Trendchart, EraWatch, EBN.

It cooperates on a group of EU projects.

Description of technology transfer

Technology transferists from the Business Development Department offer an individual approach to

the transfer of knowledge or technology into practice and will help to find a business, technology or research partner to enter a foreign market.

As part of the ESA Innovation Partner project, the TC CAS supports the transfer of knowledge and technology from the European Space Agency (ESA) space programs to industry, but also from companies or universities working with space technologies to other industrial areas outside this sector.

Companies can also use the international database of the Enterprise Europe Network to establish new business partnerships or launch technological or research collaborations.

Innovative entrepreneurship training

The department ORP primarily focuses on the universal support of the development of business, innovation, and international competitiveness of Czech companies, especially small and medium-sized enterprises. The department provides consulting, advisory, educational, and other expert services as listed below. For a more detailed description, please visit the Business Support specialised website – www.tc.cz/orp.

The Business Support Department's primary focus:

SUPPORT OF INTERNATIONAL TECHNOLOGY AND RESEARCH COLLABORATION AND TECHNOLOGY TRANSFER

The department team coordinates the provision of the international Enterprise Europe Network service in the Czech Republic. With the help of this network, they assist Czech companies to find partners for international business, technology, and research collaboration.

In so doing, they use the international supply and demand database as well as participate in international collaboration meetings of companies and in international trade fairs.

The department is involved in the ESA Innovation Partner project that supports the technology transfer from the space programme of the European Space Agency (ESA) to terrestrial applications.

PROJECT AND FINANCIAL CONSULTING

The department monitors a wide offering of consulting in the field of grant programmes at the national and European levels as well as other opportunities to finance the development and innovations in companies. Based on the analysis of the needs they identify suitable sources of financing for the client companies, as mentors they can appropriately define the project intention, and they guide the companies through the process of preparing the project application.

ANALYSIS OF THE COMPANIES' INNOVATION POTENTIAL

By means of the structured interview, the department evaluates the innovation capacities and potential of the client company, identifies their innovation opportunities, and designs steps leading to the better management of innovations within the company. The Business Support mentors assist company owners and directors to view the company from a different perspective, taking a necessary distance and a detached view, and they create space to formulate or revise the company's strategy.

'SCALE-UP YOUR BUSINESS' MENTORING PROGRAMME

The mentoring programme is designed for young and technology-oriented innovative companies with ambitions to grow internationally. The programme combines education, the sharing of experiences, and first-class tailored consulting; it prepares companies to negotiate with investors and provides them with important feedback on the business intention, essential information, and contacts for

successful growth as well as expansion into foreign markets.

'BUSINESS RUNAWAY' ACCELERATION PROGRAMME

This acceleration programme offers space to technological companies at the Technology Centre premises including the administrative facilities (equipped offices, office supplies, conference centre, etc.) as well as coherent managerial and expert consulting.

INTELLECTUAL PROPERTY PROTECTION CONSULTING

The department offers free consulting on the crucial issues of the protection and application of intellectual property rights, especially in relation to technology and industrial innovations.

BUSINESS DIGITISATION CONSULTING

The Business Support department is gradually expanding their services to support the fast-developing digitisation in client companies. They provide specialised services in collaboration with their expert partners. It mostly includes the evaluation of digitisation capacities of companies and the planning of further development in the use of digital technologies.

Advisory services

The Technology Centre of the CAS

supports the participation of the Czech Republic in the European Research Area
prepares analytical and conceptual studies for research and development
performs international technology transfers
supports the creation and development of small innovation firms

STRUCTURE OF KEY PARTNERS AND CLIENTS

The TC's main target partners and clients are the Ministry of Education, Youth and Sports (MEYS), Ministry of Industry and Trade (MIT) and the Research, Development and Innovation Council (RVVI). And also a number of supranational institutions – the European Commission, the European Parliament, the United Nations Industrial Development Organization (UNIDO) and the Joint Research Centre of the European Commission (JRC). Since its founding, TC cooperates with practically the entire community of research and development institutions of the Czech Republic, with many foreign partners, prestigious universities and private enterprises.

For a brief comprehensive information about the TC you can see www.tc.cz.

Innovation infrastructure

Acceleration Program „Business Runway“

Within the BusinessRunway acceleration program the Technology Centre CAS supports start-up innovative companies in the capital city of Prague. The companies have access to the premises in the TC CAS building with full technical facilities (equipped offices, IT infrastructure, office supplies, conference centre facilities, etc.) and management services.

The first incubated company was Space Systems Czech (today Huld), a sister company of Space Systems Finland, engaged in software development in critical applications (space applications, automotive and aerospace, healthcare, etc.). Participation in the acceleration program enabled the company to grow from zero to fifteen employees in four years and increase its annual turnover to almost 900,000 EUR. „During the program I especially appreciate that the company was able to use a well-prepared background and thus start operating within a few days. The biggest benefit for us was the opportunity to be based in the TC CAS building in Prague and benefit from the knowledge of

the experienced team. The number of professional seminars we had the opportunity to participate in enabled the continuous development of employees and the gathering of important contacts," says Daniel Štefl, co-founder and director of Space Systems Czech, about participating in the program.

Stratosyst s.r.o. remains in the program. This Czech company develops HAPS (High-Altitude Pseudo-Satellite) technology for use in astronomical space observation.

If you are interested in participating in the BusinessRunway acceleration program, please contact:
