Operating data of the park

Membership in STPA: YES
State of the park: accredited
Partner in project SPINNET: NO
Launch day: 28.8. 2014

Founder(s): VTP Brno, a.s.
Owner(s): VTP Brno, a.s.
Operator(s): VTP Brno, a.s.

Type of entity: joint-stock company

Criteria for acceptance of innovation firm: 1. Innovative potential/product/service
2. Regarding BI the company must exist no longer than

Description of the park

Introduction

TITC, the Science and Technology Park that is runned by VTP Brno, a.s., is located within the area of VUT Brno that is easily accessible from Brno's traffic circle, which is directly connected with D1 highway and airport, while Brno is strategically located at the crossroads of major Czech highways. It is also possible to come by tram no. 12, that has its final stop nearby our park, or by bus no. 53, which stops right opposite our building.

We offer fully equipped spaces, chemical and heavy laboratories and storage spaces. Provided the required conditions are met, the business incubator's spaces can be used in an advantaged mode for start-up companies.

Description of technology transfer

Our park is an expert and advisory institution that helps to realize and speed up the technology transfer (TT), i.e. to transfer the outputs from science and research activities into a commercial form, which is presented by the innovative business. Our clients have already performed 2 technology transfers - one was performed by Acam Solution s.r.o. in the field of industrial automation and development (power supplies for VUT Brno) and the second transfer was performed by Brno Solar Park a.s. - a swirl turbine for VUT Brno - Faculty of engineering, Energy institute,

Fluid engineering department of V. Kaplan).

Innovative entrepreneurship training

The company's key objectives are to create the conditions for innovative business within our region and for using the research outputs in business with an emphasis on high-tech. It brings together the science and creative potential of VUT Brno, MENDELU and MASARYK's university and the innovative commercial environment, both domestic and foreign.

TITC provides counseling in an area of technology transfer, education and support in the innovation business and runs Business Incubator (BI) that is designed for technologically oriented start-up companies.

Advisory services

TITC offers comprehensive service in the area of technology transfer, project start-up and management. It includes the support in choosing the appropriate grant program in order to encourage the investment, including help with a complex processing of project application including the counseling with public procurement. Further, the counseling service in an area of business plans for start-up companies, grant guidance and management, protection of intellectual property and venture capital are provided.

Innovation infrastructure

Development of cooperation among the business, universities and research institutes, creation of the environment for support of innovative business. Direct link to the regional scientific research centers that are being built up (CEITEC, Group CEITEC MENDELU, AdMaS, NETME) with a possibility of using their outputs, research results and specialized equipment (in a cooperation with universities and scientific institutes). We also offer a possibility of using the heavy and chemical laboratories, including the simulation of work environment.

Cooperation with universities

Arranging and offering of internships within the settled companies for the students of VUT Brno. Mutual use of technological environment and equipment. Mediation of lecturing activities of representatives from the settled companies within the lectures at VUT Brno. Mediation of rhetorical capacities from VUT Brno for the events held in VTP. We provide background materials and contacts for the solvers of bachelor, master and doctoral thesis. Students of VUT Brno are offered with space and support for their start-up activities. Further cooperation takes place at the level of our companies - cooperation of resident companies with VUT Brno - Faculty of Electrical Engineering, Faculty of Informatics and Business School (inzagi), Institute of Building Materials and Components Technology, Faculty of Building Engineering (Ing. Vychopeň), Institute of Railway Structures and Construction (ŽPSV s.r.o.), Faculty of Mechanical Engineering, Institute of Manufacturing Technology (VKV Tools), Institute of Aerospace Engineering, Institute of Solid Mechanics and Design (OHB Czechspace) etc. Lecturing, participating on students conferences, competitions and trade fairs (LEMATEC, ERA)...

BIC Brno, spol. s r.o.

Reg.nr.: 41601670

BIC Brno is a business and innovative center, which has been operating in the Czech Republic for more than 20 years. Due to their work in the field of „technology transfers“ the connection between research institutions and industrial companies, that helps with innovation transfer into practice, has been created. The main company aim is providing an assistance, education and delivery of important information. They participate on solving the various problems the companies can deal with, search for suitable partners for cooperation and ensuring their further development by the participation on projects that are financed from international, national and private resources.

Centrum hydraulického výzkumu spol. s r.o.

The company has the status of a research organization, its task is to ensure the participation of scientific and academic institutions, university students and practitioners in basic research and development in the field of fluid hydraulics, hydrostatic and hydrodynamic machines and pumping equipment. The company is disseminating its research activities through publications, seminars and training. The center operates in its hydraulic laboratory the largest cavitation tunnel in the Czech Republic, which is used for research of dynamic and erosive effects of cavitation. The measuring section, into which various types of hydrodynamic profiles can be inserted, has internal dimensions of 150 x 150 x 500 mm and the maximum achievable speed at the entrance to the measuring section is 25 m / s. In addition to experimental research in the tunnel, the laboratory also performs visualization and measurement of cavitation effect in the interior of real hydrodynamic machines. The center has long-term experience with numerical modeling of cavitation and besides common CFD tools it also has its own software that allows to model the dynamics of cavitation bubbles and cavitation structures including the force effects of cavitation collapse.
